WEBSITE UNDERSTANDING & UI/UX REQUIREMENTS

Public Website for Callybre

1. Purpose and project overview

This document provides a shared reference for planning, designing, building, and reviewing the company website. It explains the confirmed business context, proposed page structure, expected UI/UX behavior, implementation considerations, and acceptance criteria. It is intended to reduce ambiguity between the business owner, designer, developers, and QA.

Item	Status	Requirement / decision
Business type	Confirmed	New IT services and consulting startup
Target audience	Confirmed	Startups and small businesses
Primary objective	Confirmed	Build brand credibility
Brand impression	Confirmed	Modern and professional
Company name	Confirmed	Finalized; name to be inserted into final website content
Brand assets	Confirmed	Logo and brand guidelines are available
Service categories	Confirmed	Web and software development; mobile app development; IT consulting; AI and automation
Differentiator	Proposed	High-quality engineering and modern technology
Portfolio	Confirmed	Existing projects or portfolio material is available; publication permissions and final selection must be checked
Contact channels	Confirmed	Contact form and business email
Content ownership	Confirmed	Shared between the business owner and designer
Content updates	Confirmed	Updates are expected to be infrequent; developers can make changes

2. Goals and guiding principles

The website should:

- Explain what the company does and whom it serves in clear, accessible language.
- Present the company's services consistently and accurately.
- Build credibility through genuine project examples, transparent information, and a professional experience.
- Make it straightforward for prospective clients to explore services and contact the company.
- Follow the supplied brand guidelines across all pages and supported screen sizes.
- Avoid unsupported claims, fabricated testimonials, invented client logos, or unverified results.

3. Sitemap and navigation

The following structure is proposed for the initial release. Final labels and scope should be approved before high-fidelity design.

Page	Purpose	Status
Home	Introduce the company, summarize services, highlight selected projects, and provide a contact call to action.	Proposed core page
About Us	Explain the company's background, values, and working approach using approved information.	Proposed core page
Services	Present the four confirmed service categories and explain the approved scope of each.	Proposed core page
Our Work	Display project cards and, where appropriate, provide further project details.	Proposed core page
Contact Us	Provide a contact form and business email.	Confirmed channels; page structure proposed
Privacy Policy	Describe relevant data collection and handling based on actual website practices.	Recommended

Navigation requirements:

- The header should use the approved logo and provide clear links to the approved primary pages.
- The footer should include relevant navigation, business contact information, and a Privacy Policy link.
- A mobile navigation pattern must be specified in the designs.
- All links and calls to action must have defined destinations and must work as intended.
- The current-page state should be clear and consistent.

4. Page-wise requirements

4.1 Home

Objective: Establish the company's identity, communicate its value, and build initial trust.

Proposed section order:

- Header with logo, navigation, and a primary call to action.
- Hero section with a clear value proposition and supporting message.
- Short company introduction.
- Overview cards for the four service categories.
- Engineering approach or differentiators, based on approved company information.
- Selected project cards linking to Our Work.
- Contact call to action.
- Footer with relevant links and contact information.

Behavior requirements:

- Service cards link to their agreed destination, such as a section on the Services page.
- Project cards open the corresponding project destination or behave as clearly non-clickable summaries.
- The primary contact call to action leads to Contact Us or another approved contact method.
- Content and layout adapt to the agreed mobile, tablet, and desktop sizes.

Pending: final headline, CTA wording, credibility content, and number of featured projects.

4.2 About Us

Objective: Explain the company's identity, purpose, and working philosophy.

Proposed sections: company introduction or story; mission or vision if defined; values and working approach; founder/team information if approved; links to Services and Contact Us.

Requirements: use approved facts and assets; omit sections without suitable content; maintain the common design system.

Pending: company story, mission, values, and any team information to publish.

4.3 Services

Service category (confirmed)	Content to confirm before publication
Web and software development	Types of websites, applications, and software the company offers.
Mobile app development	Supported platforms and the types of mobile apps the company can deliver.
IT consulting	Scope of advisory, planning, or consulting services.
AI and automation	Specific AI solutions, automations, and workflows the company can deliver.

- Use consistent cards or sections and explain each service in accessible business language.
- Provide a clear inquiry call to action.
- Do not promise technologies, deliverables, or outcomes that have not been confirmed.
- Separate service-detail pages are outside the proposed initial scope unless approved later.

4.4 Our Work

Objective: Demonstrate capabilities through genuine project examples.

Confirmed presentation decision: project cards should appear on both Home and Our Work.

Proposed card content: project title or approved anonymized name; short summary; relevant image or screenshot; service category or technologies where verified; and a link to further details where available.

- Use only project information and imagery approved for public use.
- Obtain permission before publishing identifiable or confidential client information.
- Include outcomes or metrics only when substantiated.
- Define whether each card opens a detail page, external destination, or is non-clickable.

Pending: project selection, publication permissions, and whether individual project detail pages are required.

4.5 Contact Us

Objective: Make it easy for prospective clients to initiate a conversation. Confirmed contact channels are a contact form and business email.

Field	Proposed rule
Name	Required
Business email	Required; validate format
Company name	Optional
Service of interest	Optional; use the four approved service categories
Project details	Optional message
Submit	Validate and send the inquiry

Required form states: default; validation errors; submitting/loading; success; and failure with a recovery path.

- Deliver submissions to the agreed recipient or system.
- Use clear, actionable success and error messages.
- Protect the form against spam as appropriate.
- Handle submitted personal information securely.
- Preserve entered data after a failure where feasible.

Pending: recipient email, submission mechanism, final fields, required-field rules, and confirmation wording.

4.6 Privacy Policy

Provide a footer-accessible policy describing personal data collected and how it is used, stored, retained, or shared, as applicable. The final policy must reflect actual website behavior, including forms, analytics, cookies, and third-party integrations, and should be reviewed against applicable legal requirements.

5. Shared UI/UX requirements

Area	Requirement
Brand identity	Use approved logo files and the existing brand guidelines; do not introduce an unrelated visual identity.
Typography	Define a readable type scale for headings, body text, labels, and links.
Layout	Specify content widths, grid, spacing, section hierarchy, and alignment.
Reusable components	Define consistent buttons, service cards, project cards, form fields, navigation, and footer patterns.
Responsive behavior	Provide layouts and navigation behavior for agreed mobile, tablet, and desktop sizes.
Interaction states	Specify hover, focus, active, disabled, loading, success, and error states where applicable.
Accessibility	Support keyboard navigation, visible focus, meaningful labels, and sufficient contrast.
Content handling	Specify how long text, missing images, and optional sections affect the layout.
Visual assets	List required images, project screenshots, icons, and illustrations.
Design handoff	Link Figma frames/prototypes and component notes to the relevant requirement or page.

6. Content ownership and workflow

Role	Responsibilities
Business owner	Provide accurate company and service information; supply project details and approved assets; verify factual claims and contact information; approve final copy.
UI/UX designer	Organize content into page sections; collaborate on copy; design responsive layouts and interaction states; follow brand guidelines; prepare Figma files and handoff notes.
Developers	Implement approved designs and behavior; ensure cross-device operation; make occasional content changes; flag missing assets, unclear requirements, and technical constraints.
QA / reviewer	Verify requirements, links, form behavior, responsive layouts, accessibility checks, and agreed acceptance criteria.

Content updates are expected to be infrequent. Developer-managed updates are the current assumption; a CMS is not required unless this decision changes.

7. Developer and technical expectations

Area	Proposed expectation
Navigation	All internal and external links work correctly; responsive navigation behaves as designed.
Contact form	Validate input, submit reliably, provide feedback, and handle data securely.
Portfolio	Use a reusable project-card component on Home and Our Work.
Content management	Use developer-managed content changes unless a CMS is separately approved.
SEO	Configure page titles, meta descriptions, semantic headings, and appropriate indexing controls.
Performance	Agree measurable targets and test representative pages before launch.
Security	Use HTTPS, safe input handling, appropriate spam protection, and secure secret management.
Accessibility	Test keyboard usability and other agreed accessibility criteria.
Compatibility	Agree supported browsers, devices, and viewport sizes.
Deployment	Document hosting, domain, environment configuration, and release process when decided.

A dedicated backend, database, CMS, login system, or separate API is not assumed to be necessary. Add these only if approved requirements require them.

8. Acceptance criteria

- All approved pages and navigation destinations are implemented.
- The design follows the supplied brand guidelines.
- All four service categories have accurate, approved descriptions.
- Project cards appear on Home and Our Work as specified.
- Portfolio content is accurate and authorized for publication.
- The contact form and business email work as agreed.
- Form validation and success/failure feedback behave as specified.
- Responsive layouts are tested at the agreed screen sizes.
- Accessibility, security, and performance checks meet agreed targets.
- Page metadata and privacy information are configured as required.
- No placeholder content, broken links, or unsupported claims remain at launch.

9. Open decisions and dependencies

ID	Open item	Needed from	Impact
OD-01	Confirm company name and provide logo/brand guideline files to the project team.	Business owner	Brand application and final copy
OD-02	Approve detailed descriptions and scope for each service.	Business owner	Services page and homepage content
OD-03	Select portfolio projects and confirm publication permissions.	Business owner	Home and Our Work design
OD-04	Confirm whether project cards need individual detail pages.	Business owner + designer	Sitemap and development scope
OD-05	Confirm contact-form recipient, fields, delivery mechanism, and message copy.	Business owner + developer	Contact page implementation
OD-06	Agree supported browsers/devices and measurable performance targets.	Business owner + development team	Technical acceptance
OD-07	Confirm whether analytics or other third-party tools will be used.	Business owner + developer	Privacy, configuration, and testing
